East of Nakba (75)

Part III. Chimera

Chapter 75 NEO Galaxy Landing on the Earth (1)

Israeli astronaut Moshe was working outside the space station at an altitude of 400 km. Moshe was a pilot of the Israeli Air Force. When he completed his outside mission and was about to return inside of the space station, a tiny object approached silently and attached to his spacesuit.

The object was too small to be seen by the astronaut. Even if it was visible, he could not easily confirm it approaching him because the object was aiming for him wondering in the dark matter that was ubiquitous in the universe.

If the object were to be visible through a telescope on the Earth, it would first appear as a microscopic point at far distance. And the next moment, the object suddenly disappeared. Observer couldn't understand the reason of sudden disappearance. But after a while (though the time was so short as to be immeasurable), the spot appeared again as a larger object than before. The observer perceived the object to be approaching.

Object was traveling long distance in the space with incredible speeds exceeding that of light. The Creator ruled the dark matter. It consisted of multidimensional axes including the time and space. It was far from the knowledge of human beings. In the transcendent world, the Creator could bring object to anywhere at any time. Compared with transcendent world, the real universe was ruled by the time and the space. The light emitted by the object showed its movement to back and forth, left and right. When the object enlarged, it was getting closer.

A tiny and hibernating Neo Galaxy attached to the space suit of astronaut quietly. Astronaut Moshe returned inside the space station and took off his space suit in a barometric chamber. The temperature and pressure in a chamber were the same as those on the Earth. Then, the Neo Galaxy quickly invaded into Moshe's body. After being exposed to the atmosphere and warmed to body temperature, Neo Galaxy awakened from hibernation and began to multiply.
