East of Nakba (61)

Part II. Ethnic cleanser

Chapter 61 Ethnic cleanser (4)

Shy-Rock heard a voice of demon through Dr. Girgo.

<Only Palestinians are infected with this virus. Infected young female Palestinians have no or very few egg cells left. The Palestinians are steadily on the road to extinction, even though it will take several generations. This is neither murder nor a holocaust because it does not mean killing a human being itself.>

Shy-Rock approved the Dr. Girgo's proposal for experiments on human beings. He called the Surgeon General and assured him that the experiment should be taken place in absolute secrecy under the military jurisdiction. He also ordered that the surgeons assigned to the job would not be told the true purpose of experiment.

N-town was selected for the experiment. In the town, there were Palestinian and Jewish citizens including Ashkenazim together. The number and composition of the inhabitant were ideal. There was another reason that a military hospital was nearby city.

Subjects were informed that they were being vaccinated against a new virus for the upcoming flu season. They were also explained that they might get a slight fever after the inoculation, but it would

subside within a few days.

The inoculation was carried out very smoothly. The Jews were reassured that the military hospital was in charge of inoculation. The Palestinians obeyed the instruction of officers tamely because they knew what would happen if they defied the military.

A few days after being vaccinated, more than a few people rushed to the hospital when their fevers did not subside. Most of them were Palestinian young women and girls. In the case of Jews, some percentage of the women visited for consultation, but most of the inhabitant had no symptoms of fever.

Dr. Jirgo read the report and grinned. The result of the inoculation was just as he expected. All that was left was the inspection of reproductive organ of young Palestinian women and girls.
